Skydrive inc stock ipo

Every week we round up our travel startups that have recently received or announced funding. Please email Senior Travel Tech Editor Sean O'Neill so@skift.com do so if you have funding news. Travel startups announced more than \$46 million in funding this week.— SkyDrive, which is trying to build flying cars, has raised about \$37 million (3.9 billion yen) in a Series B funding round. Development Bank of Japan and Itochu Corporation participated. So did Strive, Obayashi Corporation, NEC Corporation, Ennos Innovation Partners, Itochu Technology Ventures, and others. The company hopes to achieve mass production by 2026. Other companies are engaged in similar technology. Lilium, a start-up of an air taxi service, raised \$240 million in funding earlier this year. In late August, SkyDrive said it conducted a pilot flight test of a manned electric vertical takeoff and landing vehicle (eVTOL). The one-seater, electric planes flew for four minutes, the company said. Here's a video of SkyDrive's test:— Easy Aerial, a drone services company, has raised \$6.15 million in Series A funding from private investors. The Brooklyn-based company said that airports, high-end resorts, and other companies could use its unmanned aerial vehicles that could help monitor perimeters, borders and live events.— SpaceOS, which helps manage offices, has raised about \$3 million (—2.5 million) in fresh funding. ImmoFinanz led the round. The startup raised a total of about \$3.8 million (about —3.7 million). If remote work as a concept lasts, SpaceOS helps take advantage because its tools aim to help any owner of real estate turn their space into a flexible and attractive workspace offering on demand. The company helps space-as-a-service operators, like Factory, Rooms and Unicorn, and traditional commercial real estate companies manage their spaces.— Globalur, an app for personal and automated travel planning and booking, received a \$12.500 grant from South Korea's National IT Industry Promotion Agency, contributing to the \$781,000 in funding it raised from angel. Founded in 2017, the Santa Clara-based startup helps people plan trips and offer its tools as a private-label service.— Akcomango, a startup built a cloud-based marketplace between companies and travel agencies on one side and accommodation providers for workers on the other, raised \$410,000 from Enern Investments.The Prague-based company, founded this year by CEO Patrick Havlicek, focusing on staying management for industrial, construction, and car companies, and it provides residence and apartment management software to participating Skift Cheat Sheet: We define a startup as a company formed to test and build a repeatable and scalable Few companies meet that definition. The rare people who often attract venture capital. Their funding rounds come in waves. Seed capital is money used to start a business, often led by angel investors and friends Family. Series A financing is typically drawn from venture capitalists. The round aims to help a startup's founders make sure their product is something customers truly want to buy. Series B financing is mainly about venture capitalist companies helping a company grow faster. These fundraising rounds can help recruit skilled workers and develop cost-effective marketing. Series C financing is usually about helping a company expand, such as through acquisitions. In addition to VCs, hedge funds, investment banks and private equity firms often participate. Series D, E and beyond These mainly mature businesses and the funding round can help a company prepare to go public or be acquired. A variety of types of private investors might participate. Photo Credit: SkyDrive ran a four-minute test flight of its flying car prototype in August. SkyDrive Other News Press Releases Skyline Champion Corp. engages in the manufacture and retail of mobile homes and other manufactured housing. It builds homes under the following brands: Skyline Homes, Champion Home Builders, Athens Park Model Vs, Dutch Housing, Excel Homes, Homes of Merit, New Era, Redman Homes, Shore Park, Silvercrest, Titan Homes in the U.S. and Moduline and SRI Homes in western Canada. The company was founded on June 1, 2018 and is headquartered in Troy, MI. Maybe our Jetsons future isn't as far as we thought. SkyDrive has successfully launched its first manned prototype with plans to make the flying car a reality as soon as 2023. The Japanese startup, which is backed by Toyota and recently received \$37 million in funding, did a public test flight of its new SD-03 on August 25 and things went swimmingly. In a video released Friday, the sleek speedster can be seen flying seamlessly around Toyota test field in the city of Toyota with a pilot at the helm for additional safety. The single-seater planes, which are many years in the making, were lifted to six feet above ground and circled the test area for about four minutes. The watershed joy proved the plane could work as intended in the field and the aviation firm one step closer to its goal of making the SD-03 a mainstream vehicle. Of the world's more than 100 flying car projects, only a handful with a person on board passed, CEO Tomohiro Fukuzawa told the Associated Press on Friday. I hope a lot of people will want to drive it and feel safe. Billed as the world's smallest electric VTOL (vertical takeoff and landing), the SD-03 measures 13 feet in length and width, and about 6.5 feet tall. That means the compact cruiser occupies as much space on the ground as two parked cars, making it an ideal size for city use. The powertrain is equipped with electric that deploy eight different rotors in four separate locations. Using eight cars is a way to ensure safety even in emergency situations (e.g. engine failure). Currently, the prototype can only fly for five to 10 at a relatively low speed. The next goal is to raise its speed to 40 mph and extend the flight time to 30 minutes. That would take it from a small, short hop planes to a viable cross-city commuter. SkyDrive hopes to get the SD-03 approved for flying before the end of this year, and plans to turn the prototype into a commercial model by 2023. It also has a different concept in the works, the SD-XX, which is projected to fly at up to 1,640 feet at 62 mph for 12 miles. (Bloomberg) - The white-knuckle Bitcoin ride took another twist Monday as the worst two-day tumble in the digital currency since March stoked concerns that the polarizing cryptocurrency boom could run out of steam. Bitcoin, the largest cryptocurrency, slipped as much as 21 percent to as low as \$32,389 over Sunday and Monday. It is the biggest two-day slide since world markets were first agitated by the pandemic last year and follows a record-high of nearly \$42,000 on Jan. 8. It needs to be determined whether this is the beginning of a larger correction, but we've now seen this parabola break so it might just be, said Vijay Ayyar, head of business development with crypto exchange Luno in Singapore.Bitcoin's price, more than quad in recent years, memories of the 2017 mania that first made cryptocurrencies Time to take money off the table, Scott MinerD, chief investment officer at Guggenheim Investments, said in a tweet from his verified Twitter account. Bitcoin's parabolic rise is unsustainable in the near term. MinerD in late December predicted Bitcoin could eventually reach \$400,000.True Believers in Bitcoin argue the rally this time is different from previous boom-bust cycles because the asset has matured with the entry of institutional investors and is increasingly seen as a legitimate hedge against dollar weakness and inflation risk. Others worry that the rally is unbridled from reason and fueled by large swathes of fiscal and monetary stimulus, with Bitcoin unlikely to ever serve as a viable currency alternative. Bitcoin is almost certainly in a different bubble and its current growth rate is not sustainable, Howard Wang, co-founder of Convoy Investments LLC, said in a Jan. 10 note. While it may mature in the future, Bitcoin as it exists is largely a speculative asset. Read: How Bitcoin compares to History's Big BubblesBitcoin has scrambled off recent dips and could do so again, potentially rebounding to as much as \$44,000 before the actual correction, Luno's Ayyar said. Bitcoin held near session lows at about \$33,200 as of 7:08 a.m. in London. Rival digital assets are also slumping, with second-largest coin Ether tumbling as much as 21%. (Updates with detail and MinerD comments.) For more articles like this, please visit us now at bloomberg.comSubscribe to stay with the most reliable business news source.— Bloomberg L.P.The electric vehicle boom has taken a much bigger stretch of the stock market, but there's still plenty of upside for savvy investors who know where to watch Tesla short sellers, caught on the wrong side of a \$38 billion hit in 2020, suffered the biggest annual mark-to-market loss Ihor One of those underwater on that trade: Michael Burry of The Big Short. Investor's Business DailyThe stock market rally is looking to expand with Tesla in a climactic run. Nio is a buy as the China EV maker unveils a luxury car, Amazon and Walmart have found that for some goods, it's often cheaper to repay the purchase price and let customers keep the products. If the stars aren't aligned, the resulting tax bomb could cost you thousands. (Bloomberg Opinion) - U.S. government bond yields have registered some notable moves in the first few days of 2021. Should they continue at their current rate, they risk causing headaches for both policymakers and stock investors because of their underlying executives. In less than two weeks, the Treasury yield curve experienced a significant increase in yields in longer-dated bonds, or what is known in financial markets as a bear scurry. The yields on 10- and 30-year bonds rose 20 basis points and 22 basis points, respectively. The spreads between those maturities and the biennial Treasury bill, on which The Federal Reserve's policies have a significant influence, widened significantly — from 80 basis points to 98 basis points for the 10-year and from 152 basis points to 174 basis points for the 30-year. These moves come when Fed policy has constantly sought to significantly suppress returns and keep them in a tight trading bond. Should the moves continue, they would also challenge some of the strong managers of funds in stocks and other risk assets by reducing their relative attractiveness and by weakening the buy signals issued by models incorporating the discounts of future cash flows. Moreover, their persistence will be concerning for the economic outlook due to their underlying managers and the potential impact on sectors that are sensitive to interest rates such as housing. What are those drivers? The recent moves in the U.S. yield curve reflect no change, real or forward-looking, in the Fed's extremely accommodative monetary policy standoff. Indeed, the minutes of December's Federal Open Market Committee meeting, released last week, reiterated that the central bank has no intention of getting its stimulus anytime soon, and when it does, the process will be extremely gradual. Some of the other potential contributors to higher returns, such as increased government default risk or more favorable growth prospects, are also unlikely to be in the game. If anything, the Fed's willingness to expand its balance sheet without limitation reinforces the idea that there is a steady and reliable non-commercial non-commercial government bonds. Meanwhile, growth prospects have deteriorated in the shadow of the recent increase in infections, hospitalisation and deaths related to Covid-19. The monthly U.S. jobs report on Friday already reported a loss of 140,000 jobs in December. The Democratic sweep of the two Georgia Senate runoff elections last week raised the prospect of higher government budget deficits and much more debt financing. But with the Fed not only committed to maintaining its large-scale asset purchases, but also open to increasing it and moving more of the purchases to longer-dated securities, so a prospect shouldn't have an immediate significant impact on returns. The most likely drivers are then expectations for higher inflation and more hesitation on the part of Treasury buyers. The former is supported by moves in inflation break-even and other inflation-sensitive market segments. The latter is consistent with the substantial market chat on how government bonds, which are so highly suppressed by the Fed and face an asymmetric outlook for yield cutouts, are no longer ideal for mitigate risk. An intensification of the recent moves in yield curves in the weeks ahead would be alarming for both policymakers and risk takers in markets. While the Fed hopes for higher inflation, it doesn't want it to materialize through stagflation — i.e. even more disappointing growth and higher inflation. The Fed has few tools, if any, to lead the economy out of such an operating environment. This, as well as the hit on corporate earnings from the lack of economic growth, will worsen what is already an extremely large disconnect between financial valuations and fundamentals. The most dominant market view right now, and it's quasi universal, is that stocks and other risk assets will continue to rise because of the abundant liquidity injections coming from central banks and allocating more private funds. After all, central banks show no tendency to moderate their huge stimulus. And investors remain strongly conditioned by a powerful mix that has served them very well so far: TINA (there's no alternative to stocks) fuels BTD (buying the dip) behavior in response to even the smallest market sellout, especially given FOMO (the fear of missing out on repeating impressive market rallies). As valid as these considerations are at this moment of time, they also warrant a close monitoring of the yield curve for U.S. government bonds. A significant continuation of recent trends will challenge the Fed, investors and the economy. This column does not necessarily reflect the opinion of the editorial or Bloomberg MP and its owners. For more articles like this, please visit us now at bloomberg.com/opinionSubscribe to stay ahead with the most reliable business news source.— Bloomberg L.P.Exxon's mega-oil findings in Guyana could be just the beginning of a long string of hydrocarbon deniers in the Guyana, Suriname basinThe financial expert and radio host says this money blunders can be expensive. Investors have a clear task ahead: find the stocks that will rise with an approaching bull market. Previous performance, of course, is no guarantee of future gains, but the stocks that have achieved rapid growth in recent months are a logical place to start looking for tomorrow's winners. There are, of course, worries centered on the newly Democratic-controlled U.S. Senate that will give the incoming Biden administration a chance to implement its tax-raising plan and the weak December jobs numbers; will they combine to derail the markets' strong upward trend? Not so fast, according to Credit Suisse's Jonathan Golub. The firm's chief U.S. equity strategist raised its 2021 year-end outlook, showing it off from 4,050 to 4,200.Golub, firstly that the Democratic candidates won both of Georgia's Senate seats in the recent runoff vote, a development that gives the Dems effective control — albeit at the closest of possible margins — The incoming Biden administration has promised itself to report both a summarized COVID relief package and reverse President Trump's policies. Control of Congress is a necessary condition. Golub said, this should lead to additional stimulus, including extending payments to individuals. The second point Golub notes as a major supporting event for the markets is the COVID vaccination programme. While describing the slow progression of the programme as underwhelming, he adds that as the population of vaccinated individuals grows, economic activity will expand. The main economic effect of the impeachment policy, in Golub's view, is a likely coincidence of revamped consumer demand [that] cannot be ignored. By describing that question, Golub says, We're going to have the biggest stimulating event in the history of the planet in the second half of this year... The strategist now sees — before the second half takeoff — as the to buy in. And that brings us back to growth supplies. We used the TipRanks database to pinpoint three exciting growth names, according to the analyst community. Each analyst-backed ticker stands to carve more gains on top of its already impressive growth. Innovative Industrial Properties (IIPR)The growing normalization of the cannabis industry in the U.S. has opened up a variety of opportunities for forward-looking businesses. Innovative Industrial Properties are among these. This company is a with a twist — it focuses on properties in the medical use cannabis sector. Like most REITs, IIPR acquires, owns, manages, and rental properties — but its target customer base is compiled experiences, state-licensed, medical marijuana operators. The company's portfolio consists of industrial greenhouses, leased as growing facilities for medical marijuana suppliers. The value of this niche is evident from the inventory performance. IIPR shares are up 137% over the past 52 weeks. Financial performance matched the stock performance; revenues have been gaining consistently, quarter over quarter, for the past two years, and in 3Q20, the last reported, hit \$34.33 million. That was a 197% year-over-year gain. There was a slight earnings dip in Q1 and Q2 of 2020, during the height of the corona panic, but the company's Q3 EPS reversed that, and the 86-cent squeeze was 59% yoy. Piper Sandler analyst Daniel Santos sees momentum building in the marijuana industry, especially now that the Senate has shifted Democratic control. COVID has created its own tailwind as states rush to fill budget holes with alternative tax sources. While this could lead to more liberal license grants, management was confident that most states would opt for a limited licensing program and would benefit existing operators - a major boost to IIPR... Strong operator fundamentals and demand from institutional investors could lead to an increased pace in acquisitions, Santos noted. Santos rates IIPR An overweight (that is, Buy), and its \$250 price target implies an upside of 40% for the next 12 months. (To watch Santos' record, click here) Overall, IIPR has 7 recent reviews on record, breaking down to 5 Buys and 2 Holds, giving the stock a Moderate Buy analyst consensus rating. Shares recently appreciated quickly, and are now trading at \$178.44. (See IIPR stock analysis on TipRanks) Par Technology Corporation (PAR)Par Technology provides support in the hospitality industry, engineering software, hardware, support services and other resources available. PAR's applications include point of sale software, content management, business intelligence, food safety monitoring, sales terminals, and video monitors. PAR's restaurant segment boasts operations in 110 countries, with more than 100,000 user installations. The company also includes a government services segment, with providing computer-based engineering services and system design to the Federal government. PAR is an important contractor of such services at the Department of Defense. This company's growth has been impressive over the past year. The 52-week profit is 103%, reflecting the necessity of strong online support for PAR's target customer base as it works to recover from the COVID-downturn. Third-quarter 2020 revenue recovered from a modest dip in the first half of the year, and at \$54.8 million hit a two-year high. Among the fans is BTIC analyst Mark Palmer, who wrote, While we expect PAR's restaurant and retail revenue to grow by about 20% in each of the next three years, expect that its Brink software business will put annual growth in the 40% context during that span... As PAR executes on its transition to a cloud cloud mode, its valuation should grow to better reflect the recurring nature of its subscription-based revenue and the margins associated with its software offerings. In line with his comments, the 5-star analyst rates PAR a Buy along with an \$80 price target. This figure indicates his confidence in a 29% one-year upside to the stock. (To watch Palmer's record, click here) PAR has strong backing from the rest of the Street. With a single Hold, all 4 other analysts recommend a review over the past 3 months, PAR stock recommends as a Buy. (See PAR stock analysis on TipRanks) Maxlinear, Inc. (MXL)The semiconductor sector is an important industry, and Maxlinear produces chips for a variety of roles: wireless and data center infrastructure, industrial connectivity and IoT programs, cable broadband and WiFi 6 network. Maxlinear's

products are found in digital resumes, mobile devices, computers and netbooks. Semiconductors have been on a tear in recent months, and MXL stock is no exception. The shares are up 81% since this time last January, and that timeframe includes sharp losses last February and March. The shift to remote work and virtual schools has put a premium on fast and reliable connections, which in turn have increased demand for the underlying chipsets. In 3Q20, Maxlinear's top line jumped to \$156 million, a 140% consecutive gain and a 95% year-over-year gain. The company credits stronger demand for broadband and connectivity products starting 2Q20 as the driver of the profits. Suji DeSilva, 5-star analyst with Roth Capital, is flat-out bullish on this stock, and his comments make it clear. We believe MXL represents a serviced investment opportunity in broadband and network RF and mixed-signal opportunities. We believe MXL sees continued strongly connected home demand boosted by continued remote work/learning. We expect MXL's fundamentals to benefit from procurement accredit in CY21, DeSilva said. DeSilva places a \$50 price target and a Buy rating on MXL shares. Its target marks a one-year upside of 34%. (To watch DeSilva's record, click here) All in the whole, the word on the Street rings largely bullish on this chip maker, with TipRanks analytics demonstrating MXL as a moderate buy. The stock has 7 reviews on record, with a 5 to 2 split between Buys and Holds. (See MXL stock analysis on TipRanks) To find good ideas for growth stocks trading at attractive valuations, visit TipRanks' best stocks to buy, a newly launched tool that unites all of TipRanks' equity insights. It is very important to do your own analysis before making any investment. More than 220,000 workers made the \$1 in their 401(k)s in the second quarter of 2020, according to Fidelity Investments.Benzinga readers and investors, Chamath can best know Palihapitiya as the SPAC King and for his role the SPAC surge of 2020. Here's more on Palihapitiya and some lesser-known fact readers may not know. About Palihapitiya: Born in Sri Lanka, Palihapitiya emigrated to Canada at the age of six. After stints at AOL, Facebook Inc (NASDAQ:FB) and Slack Technologies (NYSE: WORK), Palihapitiya launched The Social + Capital Partnership, a fund to invest in ventures no major companies will fund. Palihapitiya launched Social Capital Hedosophia with Ian Osborne to use the alternative path to traditional IPOs to bring innovative tech companies to the public market. Palihapitiya has plans to bring companies public using SMEs named alphabetically from IPOA to IPOZ. Six of the first SMCs launched, with three closed and one with a pending merger. My ambition is to be our generation's Berkshire Hathaway. It will be a Berkshire, a holding company that, instead of keeping Gillette and Coca-Cola and McDonald's, will hold tech businesses, Palihapitiya told Fortune.Palihapitiya is the chairman of Virgin Galactic Holdings (NYSE: SPCE), and has Opendoor Technologies (NASDAQ:OPEN) public with IPOB and Clover Health (NASDAQ: CLOV) Social Capital Hedosophia Holdings Corp V (NYSE: IPOE) announced a merger with SoFi last week. Palihapitiya has also invested in SPAC trading regarding MP Materials (NYSE: LP), Desktop Metal (NYSE: DM) and INSU Acquisition Corp II (NASDAQ:INAQ) targeting Metromile.Related Link: Chamath Palihapitiya's IPOD, IPOE, IPOF SPACs: What investors should know aboutSocial Media Pioneer: Before launching Social Capital, Palihapitiya was the most tense original senior management team member of Facebook. While on Facebook, Palihapitiya held roles that help with mobile and international growth, and had the role of vice president of user growth before leaving. While on Facebook, Palihapitiya helped the company grow its user base from 50 million to 700 million. Palihapitiya has been critical of Facebook in recent years, selling all of its stock in 2014. At a Benzinga Boot Camp event, Palihapitiya said Facebook should have made public earlier as it could have helped an earlier transition to mobile devices. Before joining Facebook, Palihapitiya worked at AOL and was responsible for ICQ and AOL Instant Messaging. Palihapitiya was the youngest vice president in AOL history at age 26.Big Fan of Poker: The SPAC King is a big fan of poker and has even participated in several World Series of Poker events. Palihapitiya took part in the 2011 main No-Limit Hold'em WSOP event where he placed 101st and won \$54,851. In three World Series of Poker events, Palihapitiya has earned \$138,701.The investor is also known to host poker games at his home with and renowned Silicon Valley investors like David Sacks and Jason Calacanis.Phil Hellmuth, the all-time leading WSOP bracelet holder with 15, also took place in the poker games with Palihapit. Hellmuth earned more than \$15 million in World Series from Poker competitions. Palihapitiya hosts the podcast, named after his love of poker, with Sacks, Calacanis and David Friedberg.Believer in Amazon, Tesla and Bitcoin: Three of the most popular and best performing assets of the past few years get the seal of approval from Palihapitiya and have more space tor growth. Palihapitiya invested in Tesla Inc (NASDAQ:TSLA) in 2016. Over the years, Palihapitiya has discussed that cars are only the first wave of growth for the company. Tesla could become the largest company in the world, according to Palihapitiya.In 2012, Palihapitiya began investing in Bitcoin, buying more than \$1 million worth off of a friend's recommendation. The investor no longer holds any Bitcoin, but invests in companies that own Bitcoin as its easier to manage shares instead of coins or wallets, according to Palihapitiya.Bitcoin could go to 200,000 in the next five or 10 years, Palihapitiya said in a recent CNBC interview. Amazon Inc (NASDAQ:AMZN) could be worth \$3 trillion by 2025, Palihapitiya said in 2016. You get behind these people who have (an) incredibly smart character, who know what they're doing, who're not going to bend to short-term gains and are just going to ride the train for 10 to 20 years and make the world a better place, said Palihapitiya of Tesla's Elon Musk and Amazon's Jeff Bezos.Fascinated in Wealth Early. : Palihapitiya was fascinated by the Forbes billionaires list at a young age and dreamed of getting rich one day. Palihapitiya now uses his wealth as a bridge to help others. The investor is known to be 100% at restaurants as a way to pay it forward and see the joy in others from this simple gesture. NBA Owner: In 2011, Palihapitiya became a minority investor in the NBA's Golden State Warriors. He is currently a board member for the team that won the NBA Championship in 2015, 2017 and 2018. The Warriors are the third most valuable NBA franchise by Forbes. The value of the team rose from \$363 million in 2011 to \$4.3 billion in 2020.Disclosure: Writer is long DM, IPOD. The coronavirus pandemic has complicated the process that mortgage borrowers use to endorse home loans for people with student debt. The company had a total value of \$6.2 million a year ago. (Bloomberg) -- Faraday & Future Inc., an electric vehicle startup, is in talks to go public through a merger with Property Solutions Acquisition Corp., a empty-check firm, according to people with knowledge with the matter. The special purpose acquisition company is seeking to raise more than \$400 million in equity to support the deal, which is slated to be the combined value at about \$3 billion, the people said. 2015 2015 all transactions that have not been finalized, it is possible that terms change or talks fall apart. a Faraday spokesman did not respond to multiple requests for comment. A property solutions representative declined to comment. Los Angeles-based Faraday, led by Chief Executive Carsten Breitfeld, was founded by Jia Yueting, an entrepreneur filed for bankruptcy in the U.S. in October 2019 after running up billions of dollars in personal debts. His efforts to build a business empire in China spanning interests from streaming to TVs have lent him against promised stocks and given him on the hook for \$2.3 billion in claims, according to the filing. Jia emerged from bankruptcy after setting up a creditor trust and transferring all of his shares into the electric vehicle company to it, he said in a July statement posted on the electric vehicle company website. He said as much as 10% of the trust would go towards compensatory from shareholders in Leshi Internet & Technology Corp., a now-delisted unit of its conglomerate, and that he no longer holds any equity in Faraday, but remains an employee. Approval of the plan cleared the way for the company to work toward its equity financing targets, the company said. This month, Faraday appointed Zvi Glasman, the former chief financial officer of Fox Factory Holdings, as his CFO. It said its flagship vehicle, known as FF 91, would go on sale about a year after the closure of a successful round of funding. The ranks of automakers wanting to compete with Tesla Inc. in electric vehicles are heavily populated by Chinese startups. Investors were trapped by a mania for all things related to EVs in 2020, the promotion of Chinese auto company Nio Inc.se valuation above that of General Motors Co. and Ford Motor Co. Xpeng Inc. raised \$2.2 billion from a follow-up share sale in December just a few months after its \$1.7 billion IPO, and even Internet giant Baidu Inc. was to get in as it planned to team up with automaker Geely Automobile Inc. Market. Read more: Tesla's dominant position in China could be threatened Next YearProperty Solutions, led by Chairman and Co-CEO Jordan Vogel, raised \$230 million in a July 2020 IPO. The company, which has the ability to pursue a combination in any industry, has said inception that it is intended to target companies that service the real estate industry, including real estate technology. Electric vehicle companies including Nikola Corp. and Fisker Inc. have gone public in recent years by merging with empty-check companies. (Updates with context on Jia and EVs in fifth and seventh paragraphs respectively.) Nancy Zevenbergen, head of Seattle-based Zevenbergen Capital Investments, has a knack for finding companies that can deliver hefty returns over the long term. Founding-led companies are particularly attractive. The last major adjacent oil discovery may be just weeks away, but the supermajors all missed the opportunity to hide right before themEach week Trifacta Stocks identify names that wear and can offer interesting investment opportunities on the short side. Using technical analysis of the cards of those stocks, and, when appropriate, recent actions and degrees from TheStreet's Quant Ratings, we zero in on five names. While we won't weigh in with fundamental analysis, we hope this piece will give investors interested in stocks heading off a good starting point to do further homework on the names. Names.
